

Innovative products for decentralized infrastructures

Our strength is our team and the passion of this team. **“Everything around water”** is a promise towards our customers and we want to keep this promise – with the offered range of products, our service and specific problem solutions.

Team

Tanks for small waste water treatment plants with all European certificates

Our advantages:

- freight-optimized
- concrete tank: monolithic manufacturing
- PE-tank: rotational manufacturing
- stability proofs
- verification procedure: factory production control according to EN 12566-3 part 9.3
- mobile moulding equipment

tank construction department

SBR – waste water treatment technology with experience, quality and reliability

klärofix® and klärbox® SBR-treatment plants are the latest generation of domestic waste water treatment plants.

- highest operating reliability
- low running costs
- future-oriented products which will also comply with tomorrow's requirements

Special treatment plants

for object-related applications with individual planning and execution.

- for restaurants and clubhouses, with or without cooking facilities
- butcheries
- sports facilities with fluctuating charges
- industrial facilities

District treatment plants

of 50 – 1,500 PT as new plants or conversion, restoration or optimization of existing treatment plants. If requested, we design and construct ready-to-use waste water treatment plants as your partner.

Operational management and monitoring with www.homebook.de

Master data portal

- overview of the dedicated systems
- master data can be reviewed and checked
- easy transmission of changes in master data

Telemetry portal

- overview of the dedicated systems with reference to existing failures
- details of the telemetry master data can be reviewed
- overview and control of the made calls
- error analysis and processing of failure reports
- direct call to the control system via homebook
- escalation scenarios for notification during system failures
- administration of the technicians by the service company

Maintenance portal

- overview of the open maintenance orders
- master data details can be reviewed
- index of the system locations in a general map
- online data entry of the measured values by the technician or the service company

Online archive

- upload of user-defined documents with authorization control
- automatic generation and upload of documents from the telemetry and maintenance portal (log book, maintenance protocol, maintenance report)
- supply of system documents (manuals, installation guidelines)

utp umwelttechnik pöhl GmbH is a DWA-certified company for the maintenance of small waste water treatment plants. Nationwide, more than 6,500 maintenance contracts are concluded with us. In Northern Bavaria, we serve approximately 1,600 customers directly from Seybothenreuth, the remaining plants are maintained by specially trained and authorized partners on site.

- **maintenance of waste water treatment plants**
- **inspection of ducts with an on-board camera including state evaluation by a consultant engineer**
- **shaft and pit rehabilitation**
- **retrofitting for shafts and pits**
- **leakage tests**

Service

As a partner, use all the advantages of a technology leader on the market

1 Customer service

Competent service

by the customer consultant on site. Constant customer care at our office: available 5 days a week from Monday to Friday 7.00 a.m. to 5.00 p.m. Mobile hotline for regional partners. Support by consultation in all technical relations of the project by our own project department.

2 Technical Service

Quality is our main objective

Best technical support at any time from information, planning, reliable delivery, assembly to the final commissioning by a mobile customer service as well as regular maintenances of the plants. Our team supports you in every construction phase with competent technical consultation and personal assistance on site.

3 Marketing services

You are important to us, that's why we offer you professional sales documents and high-quality marketing support. For targeted public relations with our premium strategy, you have the right means at your disposal at any time. Via special access to our website, you get 24-hour access to all important information and you can work target oriented on your market.

4 Training service

Knowing

what's going on on the market and how you can give your customers optimum service – that's what you get in our training courses which are exclusively offered to our regional partners. The basic training course provides customer specific knowledge and in advanced courses, we expand our partners' knowledge regarding our plant specific technology.

Our business fields for decentralized infrastructures

- waste water treatment
- rainwater cultivation
- utilization of rainwater
- drinking water treatment solutions for autarkic locations
- system components for new energy sources
