www.homebook®.de

We focus on innovative cloud technology.

Operational management with www.homebook.de

Master data portal

- overview of the dedicated systems
- master data can be reviewed and checked
- easy transmission of changes in master data

Telemetry portal

- overview of the dedicated systems with reference to existing failures
- details of the telemetry master data can be reviewed
- overview and control of the made calls
- error analysis and processing of failure reports
- direct call to the control system via homebook
- escalation scenarios for notification during system failures
- administration of the technicians by the service company

Maintenance portal

- overview of the open maintenance orders
- master data details can be reviewed
- index of the system locations in a general map
- online data entry of the measured values by the technician or the service company

Online archive

- upload of user-defined documents with authorization control
- automatic generation and upload of documents from the telemetry and maintenance portal (log book, maintenance protocol, maintenance report)
- supply of system documents (manuals, installation guidelines)

Join us exploring new paths.

Innovative cloud technology: www.homebook.de

Regular operator controls and professional maintenances are the basis for a long-term reliable efficiency of the waste water treatment plant. The extent of operator controls and maintenances is defined in the official approvals as well as in the maintenance documents.

The web platform www.homebook.de, developed by utp, provides considerable facilitations for all related duties and responsibilities, a considerable increase of operating reliability and clearly increased efficiency.

The information all around the small waste water treatment plant provided at the web platform highly facilitates the exchange of information between owner, service companies, authorized experts and water authorities.

With homebook®, you get an overview of small waste water treatment plants in your administrative district. The on-time execution of maintenance works or the adherence of effluent values can be checked easily.

With only a few clicks and without expensive additional software, you get access to the required documents. As far as possible, the data in the online archive will be updated automatically by the telemetry and maintenance portal. It's a completely safe and efficient solution.

Also rent www.homebook.de at a reasonable price for your operation management and maintenance contracts.

Reference project - association of municipalities in Bitburg.

Waste water disposal from one source

- operational management and monitoring concept for an association of municipalities
- daily status call of all small waste water treatment plants with qualified analysis
- support service by an expert on site
- no operator obligations for the private property owners
- transfer of the operations to the scope of responsibility of the association of municipalities
- qualified technical support by utp service GmbH and the concluded full-service-maintenance contract

Do you already know all our reference projects regarding municipal waste water treatment?

Please find a summary of our already realized klärocom®-projects under the heading "references" on our website: www.utp-umwelttechnik.de.
